

# INFORMATION SECURITY POLICY

**OPENVIEW TECHNOLOGY PC** specializes in the design, development, sales, and delivery of information technology products, applications, and associated services.

The Information Security Management System (ISMS) covers the scope of **Analysis, Design, Development, Installation, Maintenance, and Support of Software and Computing Systems, as well as the undertaking of contracts for the management of Digitization Projects**, and has been designed in accordance with management's needs and objectives.

The company's ongoing commitment to the **continuous improvement of Information Security** is a core priority and a fundamental principle shared by all its employees.

The strategic objective of the Information Security Policy is to ensure the **maximum protection of the company** against internal and external, intentional or accidental threats, through **risk minimization**, the **prevention of security incidents**, and the **reduction of their potential impact**.

To achieve this objective, all necessary measures have been defined, and the required arrangements have been implemented for the establishment and operation of an **Information Security Management System (ISMS)** in accordance with **ISO/IEC 27001:2022**.

The management of the company is also committed to:

- The full and systematic coverage of the company's stated business needs.
- The monitoring of critical process parameters through **continuous controls and measurements** ensures information security at all levels of operation.
- Continuous efforts to improve performance, with the ultimate goal of enhancing the quality of the services provided.
- Ensuring that its products and services comply with all **applicable legal and regulatory requirements**.
- Maintaining continuous awareness of applicable legislation and ensuring compliance with relevant regulations, as well as with any other requirements adopted and accepted by **OPENVIEW TECHNOLOGY PC**.
- Ensuring the **availability of the information required for the company's smooth operation**.
- Providing **training and awareness** to employees on matters related to information security.
- Establishing and reviewing **measurable objectives and targets** in the field of information security, along with the documented and continuous monitoring and measurement of information security performance.
- Ensuring information security across all activities, processes, services, and products of the company, verified and validated throughout the entire range of its operations.
- Protecting information from **unauthorized access**.
- Ensuring the **confidentiality** of information.
- Maintaining the **integrity** of information.
